

# What is STRATIFY?

It's a tool we use to help you and your doctor make the best decisions about your care.

## What does STRATIFY do?

### Calculates Score

STRATIFY calculates a score using data from your chart, like vital signs, medical history, and labs.

### Determines Risk

This score helps your doctor see if your risk of complications in the next 30 days is low or high.

### Care Plan

The score helps us decide if you need to be in the hospital or if it's safe for you to get care at home.

*If your doctor decides to do something different than what STRATIFY suggests, they will talk with you about it.*
